

QUALITY AND ENVIRONMENTAL POLICY

The management of **ARKOSLIGHT, S.L.** is conscious that the quality of the products the company designs and produces, as well as the satisfaction of its customers and the respect for the environment, are fundamental factors for the development and continuity of the firms' activity.

As consequence, it establishes a quality and environmental policy that is based on the following principles:

- Ensure that the offered products comply as well with the quality as with the safety requirements (ENEC).
- The compromise to apply, as well in the production processes as in any process of decision-making, environmental criteria that are always aiming at the prevention of contamination and the general protection of the environment, as it is the sustainable use of material and energetic resources.
- Seek the continuous improvement through measurement, assessment and periodical analysis of the environmental aspects (improvement of sustainability), the products, the processes and the results through the SGCMA (Sistema de Gestión de Calidad y Medio Ambiente = Quality and Environmental management system).
- Comply with the environmental legal requirements, as well as with further requirements determined by the management and other involved parties
- Sensitize and involve our employees, providers, customers and all other involved parties with the aim to obtain high levels of quality and environmental protection.
- Consider the ambience and context of Arkoslight in the fields of quality and environment including nature, magnitude and environmental impact of our activities and products, as well at internal as external level.
- Analysing the strategy paying attention to our environment, sector and business in order to determine the opportunities and risks, identifying, evaluating and prioritizing measures that minimize possible threats and take maximum advantage of opportunities.

This quality and environmental policy constitutes the fundamental basis for the quality and environmental management system of ARKOSLIGHT, serving as reference framework for the establishment and revision of the set objectives for quality and environment.
